Art Unit: 1755

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-3 allow for M¹ to be yttrium however it cannot be seen how yttrium may substitute yttrium.

Claim 4, sets for M² as being chosen from La, Ce and Cr however these components are not listed in claim 1, therefore the scope of claim 4 is considered outside the scope of claim 1. A dependent claim must further limit the claim from which it depends.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-6,9-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Baumard et al (5,508,242) and Maloney (6,231,991).

Baumard et al teach a sintered dielectric material including Y₂Ti₂O₇, see column 1, line 57.

Maloney teaches ceramic materials of the formula A₂B₂O₇ where A may be La or Y and B may be Ti or Zr. The instant claims are considered anticipated. Claims listing

specific properties are also considered anticipated because products of identical chemical composition cannot have mutually exclusive properties. In re Spada, 15 USPQ2d 1655,1658 (Fed. Circ. 1990). It is noted that x and y may be 1 therefor not requiring yttrium or Mn.

5. Claims 1-6,9-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Kamisawa et al (6,245,451).

Kamisawa et al teach a sintered composition including ReMnO_3 where Re is selected from Y, Er, Ho, Tm, Yb, and Lu, see column 2, lines 35-49. The claims are considered anticipated.

Allowable Subject Matter

6. Claims 7 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art of record fails to teach or fairly suggest the claimed dielectric material wherein the Mn is partially substituted with an element selected from M^2 .

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
